

## Data Flow Diagram

|                      |                                                            |
|----------------------|------------------------------------------------------------|
| <b>Date</b>          | 29 June 2026                                               |
| <b>Team ID</b>       |                                                            |
| <b>Project Name</b>  | OptiCrop smart agricultural production optimization engine |
| <b>Maximum Marks</b> | 2 Marks                                                    |

### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                   | Name                   | Description                                                                                                                      |
|------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>Oval / Rounded shape</b>              | <b>External Entity</b> | Farmer/User who enters soil, weather, and location details and receives crop recommendations.                                    |
| <b>Rectangle with numbered header</b>    | <b>Process</b>         | Analyzes user input and predicts the most suitable crop using the AI/ML model.                                                   |
| <b>Rectangle (solid fill, no number)</b> | <b>Data Store</b>      | Stores crop data, soil information, weather data, and user details.                                                              |
| <b>Labeled arrow</b>                     | <b>Data Flow</b>       | Transfers data such as soil details, weather data, crop recommendations, and feedback between the user, processes, and database. |

## Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
